## **Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-28. (Cancelled)

- 29. (Currently amended) A combination for treating a vascular proliferative disease in a patient comprising a balloon catheter and a nucleic acid encoding a single cyclin-dependent kinase inhibitor and a balloon catheter for administration of the nucleic acid, wherein the cyclin-dependent kinase inhibitor is p27.
- 30. (Previously amended) The combination of claim 29, wherein the balloon catheter is a single balloon catheter.
- 31. (Previously amended) The combination of claim 29, wherein the balloon catheter is a double balloon catheter.
- 32. (Previously amended) The combination of claim 29, wherein the nucleic acid is an expression vector.
- 33. (Previously amended) The combination of claim 29, wherein a viral particle contains the nucleic acid.

34. (Previously amended) The combination of claim 29, further comprising a liposome.

## 35. (Cancelled)

- 36. (Previously amended) The combination of claim 29, further comprising a nucleic acid encoding a cytotoxic agent.
- 37. (Previously amended) The combination of claim 36, wherein the cytotoxic agent is selected from the group consisting of thymidine kinase, cytosine kinase, cytosine deaminase, and nitric oxide synthetase.
- 38. (Previously amended) The combination of claim 37, wherein cytotoxic agent is thymidine kinase.
- 39. (Previously amended) The combination of claim 36, wherein the nucleic acid encoding p27 and the nucleic acid encoding the cytotoxic agent are operatively linked.
- 40. (Previously amended) The combination of claim 39, wherein the nucleic acid encoding p27 and the nucleic acid encoding the cytotoxic agent are operatively linked such that they form a fusion protein.

- 41. (Previously amended) The combination of claim 40, wherein the fusion protein is a p27-thymidine kinase fusion protein.
- 42. (Previously amended) The combination of claim 36, wherein the nucleic acid encoding p27 and the nucleic acid encoding the cytotoxic agent form a dicistronic construct.
